The Week in Review (TWIR)

Survey: PDPS Inquiry for Airline Pilots

AAMVA is seeking information regarding the way NDR/PDPS is currently being provided by jurisdictions. The airline industry is mandated under the Pilot Record Improvement Act (PRIA) to check the National Driver Registry (NDR) as part of the many products and services provided by our industry partners that can assist players in the driver’s license, motor vehicle and law enforcement arenas. Visit the 2019 Region 2 Conference Website for more information and to register!

UPDATE: Maryland Staggers REAL ID Deadlines, Starting July 9, 2019

As thousands of Maryland drivers are still working through the REAL ID compliance process, the Maryland Motor Vehicle Administration (MVA) has implemented a new system of staggered deadlines for renewal. MVA has increased the number of drivers who have to renew their license or state-issued ID card by July 9, 2019, to 50,000, starting with residents in the second congressional district and 7th U.S. House District.

Maryland Democratic state lawmakers supported the move.

The Maryland General Assembly approved Senate Bill 933, which phased in the REAL ID deadline, with the latest deadline staggered to July 9, 2020. State lawmakers granted counties and other jurisdictions more flexibility to help residents transition.

Voter Registration Bill Moves a Step Closer to Passage

A bipartisan legislative committee approved a bill that would make voter registration with one’s driver’s license or state-issued ID card automatic. The bill, sponsored by House Speaker Sara Gideon, D-Portland, and two Republican lawmakers, would make voter registration automatic at the time that a person applies for or renews a driver’s license or state-issued ID card. The measure would also allow people who already have a driver’s license or state-issued ID card to register to vote at their next renewal for a valid ID card. The bill was approved by the Revenue Committee and now heads to the House floor for consideration.

Survey: Help AAMVA Improve MOVE Magazine

Share your opinion regarding the way NDR/PDPS is currently being provided by State Driver License Agencies (SDLAs) through the Problem Driver Pointer System (PDPS), some SDLAs have recently stopped this service for airlines. As a result, airline representatives have asked AAMVA to provide NDR/PDPS access to the airline industry. Please respond to this survey currently being provided by the jurisdictions before determining how to work with the airline industry.

Website Acceptable File Formats

Digital ads are designed to work across all modern browsers, but display support will vary across networks and firewall configurations. Digital ads are served using Google Ad Manager and may be blocked by some networks from view. The list of compatible browsers includes:
❯ Internet Explorer (IE) 7-10 (some IE7 and IE8 configurations are known to block Google ad sources)
❯ Chrome, Firefox, Safari
❯ iOS, Android, Win7 Mobile

Third-party Creative Code: Some advertisers may be working with a third-party ad server such as Atlas or Mediaplex to serve their creatives. If an advertiser sends a piece of creative code (also known as an ad tag) that calls another ad server, we will traffic that creative as a third-party creative.

<table>

</tr>
<tr>
<td>.txt or .html</td>
<td>Third-party or Campaign Manager Tag</td>
</tr>
<tr>
<td>.js (JavaScript)</td>
<td>Third-party</td>
</tr>
</tbody>
</table>

Supported Creative Types:
❯ IMAGE: An image creative is based on an image file in GIF, JPG, or PNG format. Acceptable File Formats: .jpg, .png, .gif; 72 dpi resolution; RGB or indexed color format. Max file size 90KB. Must submit one click-through URL.
❯ GIF: Animation length must be 30 seconds or shorter; animations can be looped, but the animations must stop after 30 seconds; animated GIF ads must be slower than 5 FPS; for animated GIF ads, we recommend 3 rotations, but can vary depending on advertising content.
❯ CAMPAIGN MANAGER TAG: Sometimes called an “internal redirect” is a creative that is hosted by Google Campaign Manager. Similar to third-party creatives, a Campaign Manager tag is used to retrieve a creative asset. However, Campaign Manager tags are not sent to the user’s browser. Instead, they are processed internally within the Google Ad Manager system.
❯ JAVASCRIPT AND IFRAME TAGS: JavaScript and iframe ad tags enable rich content creatives and backup static images to be served to ad slots. JavaScript and iframe ad tags are configured using JavaScript, frames, an iframe/layer-layer combination, or an iframe/JavaScript combination.
❯ HTML5: Google Ad Manager can deliver HTML5. However, since an HTML5 creative should be trafficked as a third-party creative, any HTML5 code should work as long as the user’s browser can handle it, regardless of where the code is hosted, whether in Google Ad Manager or with a third-party service.
❯ CUSTOM: A custom creative is based on custom code that’s added in the form of a snippet, either by cutting and pasting or by adding text files. Rich content must be supplied by a third party ad vendor, such as 24/7 Real Media. We haven’t established any parameters for rich media (kinds that we accept, such as vide preroll or interstitial).

Tracking Pixels: In some scenarios, an agency, advertiser, or third party might decide to track impressions with a tracking pixel. A tracking pixel is simply code inserted into a custom or third-party creative that makes a server call and returns a transparent 1x1 image (normally a GIF file). Google Ad Manager allows for this type of tracking.
