WEBSITE ACCEPTABLE FILE FORMATS

Digital ads are designed to work across all modern browsers, but display support will vary across networks and firewall configurations. Digital ads are served using Google Ad Manager and may be blocked by some networks from view. The list of compatible browsers includes:
❯ Internet Explorer (IE) 7-10 (some IE7 and IE8 configurations are known to block Google ad sources)
❯ Chrome, Firefox, Safari
❯ iOS, Android, Win7 Mobile

Third-party Creative Code: Some advertisers may be working with a third-party ad server such as Atlas or Mediaplex to serve their creatives. If an advertiser sends a piece of creative code (also known as an ad tag) that calls another ad server, we will traffic that creative as a third-party creative.

<table>

</tr>
<tr>
<td>.txt or .html</td>
<td>Third-party or Campaign Manager Tag</td>
</tr>
<tr>
<td>.js (JavaScript)</td>
<td>Third-party</td>
</tr>
</tbody>
</table>

SUPPORTED CREATIVE TYPES:
❯ IMAGE: An image creative is based on an image file in GIF, JPG, or PNG format. Acceptable File Formats: .jpg, .png, .gif; 72 dpi resolution; RGB or indexed color format. Max file size 90KB. Must submit one click-through URL.
❯ GIF: Animation length must be 30 seconds or shorter; animations can be looped, but the animations must stop after 30 seconds; animated GIF ads must be slower than 5 FPS; for animated GIF ads, we recommend 3 rotations, but can vary depending on advertising content.
❯ CAMPAIGN MANAGER TAG: Sometimes called an “internal redirect” is a creative that is hosted by Google Campaign Manager. Similar to third-party creatives, a Campaign Manager tag is used to retrieve a creative asset. However, Campaign Manager tags are not sent to the user’s browser. Instead, they are processed internally within the Google Ad Manager system.
❯ JAVASCRIPT AND IFRAME TAGS: JavaScript and iframe ad tags enable rich content creatives and backup static images to be served to ad slots. JavaScript and iframe ad tags are configured using JavaScript, frames, an iframe/layer-layer combination, or an iframe/JavaScript combination.
❯ HTML5: Google Ad Manager can deliver HTML5. However, since an HTML5 creative should be trafficked as a third-party creative, any HTML5 code should work as long as the user’s browser can handle it, regardless of where the code is hosted, whether in Google Ad Manager or with a third-party service.
❯ CUSTOM: A custom creative is based on custom code that’s added in the form of a snippet, either by cutting and pasting or by adding text files. Rich content must be supplied by a third party ad vendor, such as 24/7 Real Media. We haven’t established any parameters for rich media (kinds that we accept, such as vide preroll or interstitial).

Tracking Pixels: In some scenarios, an agency, advertiser, or third party might decide to track impressions with a tracking pixel. A tracking pixel is simply code inserted into a custom or third-party creative that makes a server call and returns a transparent 1x1 image (normally a GIF file). Google Ad Manager allows for this type of tracking.
