AAMVA Releases 'Design Principles and Guidelines for Secure DL/ID Cards (SCDP)'

Imagine investing time, money, energy, and resources into a new secure document and then realizing that you did not get out of it what you would hope to. This is one of the challenges that face issuing authorities when it comes to designing a new driver license or identification card. The reality is that it is possible to be in compliance with the AAMVA Driver License/Identification (DL/ID) standard and yet still not achieve an optimal outcome in the effectiveness of your card's design. [The Secure Card Design Principles \(SCDP\)](#) whitepaper is intended to lay out a set of principles, guidelines, and practices that can maximize the probability of developing and maintaining a DL/ID that will be resistant to compromise. Where the DL/ID standard provides the "building blocks" for designing a

secure DL/ID card, this SCDP further describes a process for how to use those "blocks". [Watch a video on the SCDP here!](#)
