Technology is Evolving to Include Mobile Credentials
There is Nothing to Fear
Mobile ID expands the capabilities of physical IDs

- Citizens have greater control over sharing personal information
- Mobile IDs enable government administrators to confirm and/or make “real-time” changes
- Governments can offer additional products or services
Mobile IDs: Need to Be Read & Verified by Many Sources

Interoperability must occur between all states
Mobile IDs: Architecture Provides a SUPER connected credential

Connected to issuer

Connected to the world surrounding the citizen
Principles for a New Era of Empowerment

- Voluntary
- Interoperable
- Private
- Secure
- Remote-Capable
Mobile IDs Present Endless Possibilities

Remote registration

Remote provision or revocation of licenses

Renewal Notices or Emergency Alerts

Travel
Need to **Bridge the Gap**
Between Physical and Mobile IDs

Customize The Degree of Mobility You Need

Final Thoughts

- The future is mobile – need to plan for this paradigm shift

- In the interim, physical and mobile IDs can work together to provide greater security
Powering the trusted identities of the world’s people, places & things
