[NMVTIS State Web Interface \(SWI\) – Instant Title Verification Using the VIN Search Feature](#)

Tuesday, July 25, 2017, 2:00-3:00PM

Before a jurisdiction issues a title or other ownership document or record, the SWI can provide information to help the jurisdiction determine whether the ownership documentation presented with the application are valid. The information supports jurisdictions' titling processes for both new and used vehicles. The Anti-Car Theft Act requires each jurisdiction to perform an instant title verification check before issuing a title to an applicant claiming to have purchased the vehicle from an individual or entity in another jurisdiction. The SWI VIN search feature can be used to satisfy this legal requirement. In addition, the NMVTIS best practice is that jurisdictions perform an inquiry before issuing a title or other ownership document or record, whether or not the applicant claims to have purchased the vehicle in another jurisdiction.

SYSTEMS TRAINING

JULY

NMVTIS has two third party transactions that involve updates between the central site and multiple states. Because the transactions involve multiple states and the central site, it is possible for a transaction to break down before it completes. Further activity against this title record is greatly restricted until the problem is resolved. This webinar provides instruction as to how to identify and resume suspended transactions. The intended audience for this webinar are NMVTIS Help Desk Personnel, Business Process Analyst and IT System Integrators.

Ohio Utilizes Portable Driver Simulators to Assess Driving Skills of New Drivers

As part of the Drive Toward a Safer Ohio initiative, the Ohio Department of Public Safety (ODPS) has partnered with the Children’s Hospital of Philadelphia (CHOP) and the Ohio State University (OSU) to develop portable driver simulator systems (PDSS) to assess driving skills of new drivers before they test for their permanent Ohio driver license. The driver simulators will provide a pretest assessment at the BMV Driver Examination stations by testing applicants on their ability to appropriately respond to routine traffic stops, traffic lights, emergency vehicles, stop signs, railroad crossing, cross walks and school zones. The assessment score will not affect the ability to obtain a driver’s license, but will only serve as diagnostic data for the BMV and CHOP during the pilot program. [Read more here.](#)

AZDPS Receives \$600,000 To Improve Computerized Dispatch

Computer aided dispatch (CAD) is the virtual life-line for law enforcement officers at the hands of dispatchers. Thanks to the Governor’s Office of Highway Safety (GOHS), the Arizona Department of Public Safety will be able to replace its aging CAD system with new, Spillman state of the art technology, enabling the agency to interface with other state agencies, specifically the Arizona Department of Transportation (ADOT). FEDERAL NEWS

U.S. House Subcommittee Moves Autonomous Vehicles Legislation

The United States House of Representatives Digital Commerce and Consumer Protection Subcommittee held a [hearing](#) on their draft autonomous vehicles legislation. Subcommittee Chairman Robert Latta (R-OH) offered a bipartisan [amendment](#) in the nature of a substitute that replaced previous versions of the legislation being considered by the Subcommittee. Of particular interest to AAMVA is Section 2 – NHTSA Authority and State Preemption for Autonomous Motor Vehicles – which seeks to preempt state authority to regulate autonomous vehicles, stating that "No state or political subdivision State may adopt, maintain, enforce, impose, or continue in effect any law, rule, regulation, duty, requirement, standard, or other provision having the force and effect of law related to the design, construction, mechanical systems, hardware and software systems, or communications systems of highly automated vehicles or automated driving system equipment unless such law, rule, regulation, duty, requirement, standard, or other provision having the force and effect of law is identical to a standard prescribed under this chapter." This language precludes a state from regulating the vehicle safety components of a motor vehicle. At issue is how this language affects regulation of the operational driving task, and whether states are precluded from regulating the operational safety of the vehicles in general.
